SUMMARY

Software Engineer with 5+ years of experience designing, building, and maintaining scalable software systems in the warehouse domain. Proficient across the full stack, with expertise in Java, Spring Boot, JavaScript, React, and AWS cloud technologies. Currently serving as an Associate Technical Lead, contributing to the warehouse management system of the world's largest food distributor, Sysco. Began as a Junior Software Engineer, playing a key role in modernizing the legacy monolithic warehouse application, and now collaborates with cross-functional teams to design and deliver high-impact features that drive multi-million-dollar business value.

TECHNICAL SKILLS

Java | SpringBoot | JavaScript | React | SQL | AWS | PLSQL | Kafka | Docker | Jenkins | Terraform | NextJS | Typescript

WORK EXPERIENCE

Sysco Labs | Colombo, Sri Lanka.

Associate Technical Lead

2024 August - Present

- Worked with the USA and UK teams to develop new features for the warehouse web application and for the handheld devices that are used by more than 15,000 users across 100+ warehouses.
- Updated Terraform scripts and Jenkins pipelines to create new AWS infrastructure for UK expansion.
- Provided on-site hyper care support for a newly launched warehouse in London for 2 weeks and managed to keep the operations running smoothly from the start.
- Provided Level 3 production support to all the warehouses in the United States when needed.
- Implemented an event-driven framework that supports both PL/SQL code and Java microservices using Kafka, AWS Lambda, and Event Bridge rules.
- Guided other team members on both domain and technical issues during the design and development of new features.
- Created Datadog alerts to identify production issues proactively, so that the warehouse operations can be carried out with minimal impact
- Optimized performance for long-running processes, reducing execution time by 60%

Senior Software Engineer

2022 August - 2024 August

- Identified and fixed issues on the Java backend and legacy PL/SQL that facilitate both Android and Windows CE handheld devices.
- Implemented features in the modernized React web app by extracting the logic from the legacy Oracle Forms, with unit tests, integration tests, and automation tests.
- Kept the Java components that support the main application up to date by addressing production bugs, upgrading Spring Boot libraries, implementing new features, testing them, and deploying them on AWS.
- Assisted the QA team in improving the automation test suite by implementing reusable classes and improving the stability of test cases, which resulted in bringing down the manual regression effort significantly.
- Made improvements in the DevOps area such as migrating old Concourse jobs to Jenkins and updating Terraform scripts.
- Integrated the HashiCorp Vault secret manager into the legacy application to improve application security.

Software Engineer

2021 March - 2022 July

- Key member in the team that developed the data transfer system between warehouse databases using Kafka, unlocking cross-dock capabilities for Sysco.
- Implemented a multi-tenant API to provide Kafka consumers and producers with access to warehouse databases.
- Optimized application performance by conducting load tests with JMeter.
- Integrated Datadog into the application to monitor performance metrics and logs.
- Developed an email notification system to alert the team of failures in the production environment.
- Implemented API endpoints to manage Kafka message queue offsets.
- Implemented an automation suite to test data synchronization through Kafka queues.

Zeno Innovations | Colombo, Sri Lanka.

Software Engineer Intern

2019 August - 2020 February

EDUCATION

B. Sc. (Hons) in Information Technology Specializing in Software Engineering

Second Class Lower Division

Sri Lanka Institute of Information Technology - 2017 February - 2021 February

COMMERCIAL PROJECTS

Warehouse Data Transfer System

The solution implemented to sync order data between multiple warehouses databases using Kafka message queues.

Technologies - Java SpringBoot , Apache Kafka , Oracle SQL, AWS

Warehouse Management System Modernization

Modernizing the existing warehouse management desktop application written in oracle forms and PL/SQL to a SpringBoot and React Web application.

Technologies - Java SpringBoot , JavaScript React, Oracle SQL, AWS

Warehouse mobile app backend

Back-end application supporting multiple mobile apps (Android and Windows Mobile) used on warehouse handheld devices, providing both REST and SOAP endpoints.

Technologies - Java SpringBoot , Oracle SQL, AWS

Warehouse Microservice backend

Consists of several microservices developed using domain-driven architecture, encapsulating the core business logic. Invoked by the mobile and web BFF (Backend for Frontend) layers, with an event-driven mechanism to support the required business flows.

Technologies - Java SpringBoot , Oracle SQL, AWS

PERSONAL PROJECTS

Print shop manager

Small-scale project to manage the day-to-day tasks of a medium-scale print shop, including invoicing and google account login.

Technologies - React, NodeJS, Firebase

Github - <https://github.com/chamikaravinda/printshop-manager>

Zigmatron Hub

Personal portfolio website developed using Next.js. Animations were implemented using React Bits to give a modern look. Emails were handled using Resend. Hosted on GitHub Pages using GitHub Actions.

Technologies - NextJS, Firebase, Github pages

URL - <https://chamikaravinda.github.io/>

iZigma Blockchain

This is an JavaScript library that can be downloaded from the npm package manager and used to implement a single node of a blockchain.

Technologies - NodeJS

NPM package - <https://www.npmjs.com/package/izigma-blockchain>

Casper Ai

Application similar to Draw.io that developers can collaborate on engineering diagrams. Carried out to understand the best practices that can be done during AI-accelerated development.

Technologies - NextJS, Antigravitiy IDE

Github - <https://github.com/chamikaravinda/Casper-AI>

PUBLICATIONS

“iSAY”: Blockchain-based Intelligent Polling System for Legislative Assistance

International Journal of Advanced Computer Science and Applications - 2021 January

EXTRA CURRICULAR

- SLIIT Mini Hackathon 2018 - Reached top 7 stage with the team
- HackX 2018 – Hackathon organized by University of Kelaniya, Reached the final 15 with the team.
- SLIIT Game Fest -2019 - Runner Up in FIFA 19
- SLIIT Bash Cricket Tournament - Reached Semi-Final
- SLIIT Futsal Tournament - Reached Semi-Final stage
- Member of the School Cricket team - Played from U13 to U17
- Plays cricket for Sivali CC (Division III) and for SyscoLabs
